

Competence Oriented Multilingual Adaptive Language Assessment and Training System (COMALAT)

Project description:

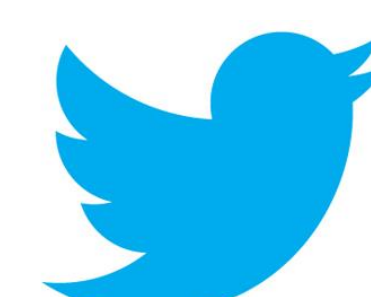

COMALAT is a language training system for *Vocational Education and Training (VET)*. COMALAT provides learning materials as an innovative Open Educational Resource (OER) and is able to adapt itself to the needs and objectives of learners. Each of the learners is *individually* supervised by the system, in order to develop job-oriented language skills. For this reason, activities for language development and for specific professional purposes are integrated into the learning materials by the system. The COMALAT System wants to present itself as a flexible, web-based platform and application for mobile devices for teaching and learning language skills. The system offers German, English and Spanish learning materials for free to all EU citizens as Open Educational Resource (OER).

My Lesson:

In the “My Lesson” page, all available learning options should be displayed for the learner. The learner can find the suitable content to learn in the main menu above the embedded content. The content is dynamically adjusted according to the needs and progress of the learner. The menu also provides the links to additional training and individual tests. The menu is filled with the available options for the learner, based on published lessons and tests with the corresponding meta data.

My Progress:

The “My Progress” page is intended for the visualization of the individual learning progress. Each learner has visualizations for his individual skills and weaknesses. The progress in the learning path is visible for the learner. Based on database entries and services provided by other tools in the COMALAT System accessible via their APIs, a dashboard is created for the overview of the learning progress.

My Profile:

In the “My Profile” Page all information about the learner can be specified. Each learner must add her or his details to the available profile forms. Based on the chosen options and entered data different learning content is suggested as next lesson and test.

My Achievements:

The “My Achievements” page will display various information regarding the learning success and progress of the learner. From time to time, the learner is rewarded for learning on the COMALAT platform.
